

## Math: Student Text

By Hm Group

ROWMAN LITTLEFIELD, United States, 2000. Paperback. Book Condition: New. Revised edition. 272 x 211 mm. Language: English . Brand New Book. Do your students have difficulty understanding math terms? Remembering the steps of algorithms in sequence? Interpreting data in displays? Our math study skills program will help you teach them math and how to learn! Math has its own vocabulary, notation, and procedures. Just as working with integers is a learned skill, so are the abilities to listen, problem solve, locate information, and take a test. Throughout the hm Program, we assume that problem solving should be the central focus of the mathematics curriculum. Study skills are for everyone: many students who do well in math can benefit from learning how to organize their skills into a useful system. Others who are doing poorly may lack proficiency in learning and study skills and will need to learn both the skill and systematic ways of using them. The solution is often a combination of study skills and a dose of self-confidence. As students gain effective learning skills, they become more competent and confident learners. For grades 7 and up.

### Reviews

*Extensive information for book fans. It is written in basic words and never hard to understand. It is extremely difficult to leave it before concluding, once you begin to read the book.*

-- **Otis Wisoky**

*This publication is great. It is full of wisdom and knowledge You will not really feel monotony at any time of the time (that's what catalogs are for relating to when you ask me).*
