

Current Intrapartum Care Practices in India

Filesize: 4 MB

Reviews

This type of publication is every thing and helped me seeking ahead and much more. It usually fails to charge too much. It is extremely difficult to leave it before concluding, once you begin to read the book.

CURRENT INTRAPARTUM CARE PRACTICES IN INDIA

VDM Verlag Mai 2008, 2008. Taschenbuch. Book Condition: Neu. 220x150x5 mm. This item is printed on demand - Print on Demand Neuware - According to the annual report of the Government of India, 100,000 women annually continue to die because of childbirth related complications (Ministry of Health and Family Welfare (Government of India), 2000-2001). In India, over 90% of women become mothers and a majority of them deliver without skilled assistance during delivery. This translates to approximately 30 million women in India experiencing pregnancy every year, and 27 million having live births (Bakshi, 2006). Of these, 136,000 maternal deaths occur every year due to childbirth complications, most of which can be prevented. Literature reveals that lack of appropriate care during pregnancy and childbirth, and especially the inadequacy of services for detecting and managing complications, explains most of the maternal deaths. Less attention has been paid to the quality of care within hospital based-services and there is growing evidence that women receive and experience appalling care in some institutions. A convenience sample (n = 188) of maternity care providers comprising doctors and nurse-midwives was obtained from the northern states of India. A semi-structured survey questionnaire was developed with 34 items in the form of fixed-choice and open ended questions. The developed questionnaire was intended to measure the intrapartum care practices comprising six elements: episiotomy, labor induction, birthing position, labor pain management, fundal pressure, and childbirth support. Statistical Package for the Social Sciences (SPSS) software was used for descriptive analysis of the data. The findings of the study demonstrated that providing lithotomy position at the time of delivery and giving episiotomy to all primigravida mothers were highly practiced during intrapartum care. Care providers believe that episiotomy has more benefits over perineal laceration, such as easy wound healing, prevention of deep perineal lacerations,...
